

Low Level Design Document
PROJECT NAME HERE

Author	Name of author(s)
Reviewer	Name of reviewer(s)
Circulation	Confidential, for internal use only.
Project Name	Short name for project.
Description	One line description of project.

Detailed History of Changes:

Version	Date	Author	Description of Changes

The LLD documentation is a fully implementable document that can be given to another person to code without any ambiguity or having to introduce any new concepts.

Contents

[1. Overview](#)

[2. Implementatoin Design](#)

1. Overview

Give an overview or roadmap of the low level design. The LLD can be grouped into a number of software units.

2. Implementation Design

If design information falls into more than one paragraph, it may be presented once and referenced from the other paragraphs. Design conventions needed to understand the design shall be presented or referenced.

2.1 (Software unit, or group of software units)

This paragraph shall describe a software unit. The description shall include the following information, as applicable. The design should be presented in a functionally logical

manner.

1. Unit design decisions, if any, such as algorithms to be used.
2. Any constraints, limitations, or unusual features in the design of the software unit.
3. The programming language to be used and rationale for its use if other than C (or C++ for GUIs).
4. Pseudo-code or flowchart to explain the implementation logic.
5. Exact error and syslog messages.
6. Exact data structures, function names, prototypes and file names (include "include" files, Makefiles) to be added or changed.
7. Variable names, macros, constants, memory allocation calls.
8. Comments to describe algorithms and cases. These comments can be directly placed in the code.
